THE SAFEST PLACE TO BE IN

When it comes to protecting people inside and outside the car, the CR-V is well-equipped with the most advanced safety technology available. To help you steer clear of potential trouble Anti-lock Braking System (ABS) and Vehicle Stability Assist (VSA) provide extra safety. The VSA system controls brake pressure and power delivered by the engine, thereby enhancing vehicle stability and providing greater driving control during acceleration, cornering and emergency manoeuvres. The front, side and curtain SRS Airbags ensure safety of the driver as well as the passengers.

Stopped on a steep hill? No worries. When the driver's foot moves from the brake pedal to the accelerator, Hill Start Assist (HSA) will maintain brake-line pressure, giving the driver time to push the accelerator and resume motion. Greater stability for solid and superior road handling and a high viewpoint for superb visibility ensure a new sense of authority over the road.

EBD (Electronic Brake-Force Distribution) System

The system apportions/distributes braking force between the front and rear wheels based on distribution of weight within the vehicle.

ABS (Anti-Lock Braking System)

It prevents locking of wheels during braking to avoid skidding and lets you maintain control over the steering.
